

ARDUINO PROGRAM

Heart Rate Monitor Using Arduino (Tinkercad)

```
#include <LiquidCrystal.h>
LiquidCrystal lcd(12, 11, 5, 4, 3, 2);

int alarm = 6;

void setup() {
  pinMode(alarm, OUTPUT);
  lcd.begin(16, 2);
  Serial.begin(9600);
}

void loop() {
  int heartRate;
  heartRate = random(40, 150);

  Serial.println(heartRate);
  lcd.print("Heart Rate: ");
  if(heartRate > 100 | heartRate < 60)
  {
    lcd.print(heartRate);

    digitalWrite(alarm, HIGH);
    delay(500);
    lcd.clear();
  }
  else
  {
    lcd.print(heartRate);

    digitalWrite(alarm, LOW);
    delay(500);
    lcd.clear();
  }
}
```

Note: The program generates a simulated heart-rate value using random(40, 150).

Heart Rate Monitor

This is the stimulation of heart rate monitor using potentiometer because Pulse sensor is not available in tinker card
